Congratulations on the purchase of your new software!

Loading Instructions

Please burn your software to either a CD/DVD ROM or transfer to a USB memory stick (flash drive).

Insert the CD/DVD or USB stick into the Pegasus Wing (either CD/DVD drive or the one of the two USB ports).

1. Now, on the main display, go to 'Settings'. (Top right corner)
2. Now go to 'Import/Export/Delete'
3. We want to Import Total Presets, so press on the 'Total Presets' button in the Import field at the top of the 'Import/Export/Delete' page.

Now choose if you'd like to select the data sources from CD-Rom or USB by pressing on the respective button in the top right corner.

Locate your Total Presets and then choose the first Total Preset to load.

4. The Total Preset will begin to flash. Choose a free space on the display (or move up and down the Total Preset Banks) in order to find a suitable free space.
5. Simply press on a free space to import the Total preset.

Repeat this process until all of the Total Presets are loaded.

Please repeat this process for importing Styles, Tyros Styles, MIDI and MP3, but rather than press on the 'Total Preset' button in the Import page, select the appropriate button i.e Audio, Style etc.
